PROFESSIONAL SUMMARY

Software Engineering graduate with **nearly 1 year of practical experience** developing robust backend systems and **full-stack applications** in corporate environments (FPT Software, ASOFT). Possessing a strong command of the **.NET Ecosystem, System Architecture**, and **interactive UI development**.

With a proven track record of leading development teams and an exceptional **9.5/10 OJT performance score**, I am driven by a clear professional roadmap: **transitioning into a Technical Lead role within the next 2 years** and advancing to a **Project Manager position within 5 years**. I aspire to mentor junior developers, drive high-level architectural decisions, and lead the delivery of complex, scalable systems that bridge the gap between technical excellence and business value.

WORK EXPERIENCE

ASOFT

12/2025 – 03/2026

Role: Full-Stack Developer (Fresher)

- **Description:** Development and customization of the company's internal core ERP 9.9 framework.
- **Languages:** C#, JavaScript, SQL.
- **Technicals:** .NET Framework, ASP.NET, Kudo, SQL Server, SVN, ERP System Architecture.
- **Key Contributions:**
 - Contributed to the development, maintenance, and debugging of the company's internal **ERP 9.9 system**.
 - Customized complex user interface screens and extended business logic functionalities utilizing **JavaScript, Kudo**, and the proprietary core framework.
 - Utilized **Kudo** for system management, debugging, and deployment workflows within the company's infrastructure.
 - Managed source code and collaborated with the development team using **SVN** version control, ensuring system stability during customization.
 - Analyzed and optimized **SQL stored procedures** to enhance data processing speed within the ERP modules.

FPT SOFTWARE

08/2024 – 12/2024

Role: Back-End .NET Developer Intern

- **Project:** Online Course E-learning Platform. Team size: 8.
- **Languages:** C#, JavaScript, SQL.
- **Technicals:** ASP.NET Core, ReactJS, Vue, Entity Framework Core, Clean Architecture, SignalR, LINQ, SQL Server, RESTful API, Background Service, JWT, VNPay, PayOS, SePay, Gemini AI, Figma, Docker.
- **Key Contributions:**
 - Collaborated in building the system utilizing **Clean Architecture** and **Repository Pattern** to ensure scalability and maintainability.
 - Contributed to frontend integration and interactive UI development utilizing **JavaScript, ReactJS, and Vue**.
 - Implemented secure **Authentication & Authorization (JWT)** and integrated multiple payment gateways (**VNPay, PayOS, SePay**) for real-money transactions.
 - Engineered a real-time customer support chat system using **SignalR** and integrated **Google Gemini AI** for automated user assistance.
 - Developed **Background Services** for automated notification tasks and optimized **LINQ queries** to improve database performance.

PROJECTS

VINANCE APPLICATION (Personal Finance Assistant)

08/2025 – 12/2025

Role: Back-End Developer & Back-End Leader

- **Description:** A smart personal finance assistant designed to reduce manual data entry by up to 90% through advanced automation features (OCR receipt scanning, Voice input, Bank sync), AI-powered spending forecasting using Prophet, and intelligent budgeting, saving goals.
- **Team Size:** 4.
- **Languages:** C#, JavaScript, Java, Python.
- **Frameworks/Libraries:** ASP.NET Core, Entity Framework Core, xUnit, ReactJS, ReactNative, Retrofit, Tailwind CSS, Zustand, Nativewind, Flask,...
- **System Architecture:** Clean Architecture.
- **Database:** PostgreSQL, SQLite.
- **Source Code & DevOps Management:** Git/GitHub, Azure, Render, Fly, Docker, Jira, SonarQube.

- **Key Contributions:**
 - Developed AI-powered OCR for automatic receipt scanning & classification.
 - Integrated Prophet model to forecast monthly spending trends.
 - Built Excel export system with dynamic financial visualization charts.
 - Designed core RESTful APIs for Dashboard analytics & manual data entry.
 -  **GitHub Link:** [Back-End](#) — [Python-Service](#)
-

MOM AND BABY (Health-tech Startup Ecosystem)

03/2025 – 07/2025

Role: *Back-End Developer & Team Leader*

- **Description:** An AI-powered health-tech startup project designed as a comprehensive ecosystem for pregnant women and caregivers. The platform bridges the gap between users and healthcare professionals through seamless doctor-patient connectivity, automated appointment scheduling, and premium membership models, while utilizing AI to simplify routine healthcare tasks.
 - **Team Size:** 6 (Interdisciplinary collaboration between Software Engineering, Economics, Design, and Japanese Linguistics).
 - **Languages:** C# (.NET 8), Dart (Flutter).
 - **Technicals:** N-Layer Architecture, SignalR, PayOS, Background Service, JWT Authentication, MimeKit, Gemini API, GitHub, Render, PostgreSQL, Figma, Docker,...
 - **Key Contributions:**
 - Architected and developed the complete Backend system using .NET 8 & N-Layer Architecture.
 - Built Real-time Chat system for customer-staff support using SignalR.
 - Integrated PayOS gateway for seamless online payment processing.
 - Developed core RESTful APIs to handle order flows and system logic.
 - Designed an optimized scheduling algorithm to manage doctor-patient appointments efficiently.
 - Implemented secure Authentication & Authorization (JWT) integrated with Google/Facebook.
 -  **GitHub Link:** [MomAndBaby Repository](#)
-

COFFEE SHOP APPLICATION (Management Solution)

05/2025 – 06/2025

Role: *Full-Stack Developer*

- **Description:** A comprehensive management solution for coffee shops, streamlining the entire workflow from order placement and payment processing to real-time communication between customers and staff. The application focuses on high performance and user experience.
 - **Team Size:** 4.
 - **Languages:** C# (.NET), Java (Android).
 - **Technicals:** RESTful API, Retrofit, SQL Server, SQLite, MVVM, SignalR, Background Service, PayOS, Azure, GitHub, JWT Authentication,...
 - **Key Contributions:**
 - Implemented secure Authentication (JWT) with Google/Facebook integration.
 - Built Real-time Chat system for customer-staff support using SignalR.
 - Integrated PayOS gateway for seamless online payment processing.
 - Developed core RESTful APIs to handle order flows and system logic.
 -  **GitHub Link:** [Back-End](#) — [Front-End](#)
-

SMOKING CESSATION WEBSITE (Community Platform)

05/2025 – 08/2025

Role: *Back-End Developer*

- **Description:** A community-centric web platform developed to empower individuals to overcome smoking addiction. The system provides personalized cessation roadmaps, progress monitoring, and interactive social features to foster peer support, ensuring high maintainability and scalability through modern architectural standards.
- **Team Size:** 4.
- **Languages:** C#, JavaScript.
- **Technicals:** RESTful API, ReactJS, Tailwind CSS, SQL Server, Clean Architecture, Background Service, Gemini, GitHub, JWT Authentication,...
- **Key Contributions:**
 - Implemented secure Authentication & Authorization (JWT) integrated with Google/Facebook.
 - Integrated Google Gemini AI to build an intelligent support chatbot.
 - Architected the core Backend system and developed robust RESTful APIs following Clean Architecture standards.
-  **GitHub Link:** [Project Repository](#)

**** Note:** The projects listed above represent only a selection of my most notable work. See more projects and technical experiments on GitHub: github.com/HoangPhuc517

TECHNICAL SKILLS

- **Languages:** C# (Strong), SQL (Strong), Java (Middle), JavaScript (Base), Python (Base).
- **Core Frameworks:** ASP.NET Core (Strong), Entity Framework Core, SignalR, WPF.
- **Architecture:** N-Layer (Strong), Clean Architecture (Middle), RESTful APIs, MVVM.
- **Database:** SQL Server (Strong), PostgreSQL (Middle), SQLite.
- **DevOps & Tools:** Git/GitHub (Strong), Azure, Docker, Render, Jira, SonarQube, Figma.

EDUCATION & AWARDS

FPT University Ho Chi Minh City	2021 – 2025
Bachelor of Software Engineering	GPA: 7.4/10 (Good)
– Honors: Excellent Student Title (Summer 2025) — OJT Completion Certificate (9.5/10)	

CERTIFICATIONS

– CertNexus Certified Ethical Emerging Technologist (Coursera)	Jun 2024
– Software Development Lifecycle Specialization (Coursera)	Mar 2024
– Java Enterprise Edition (Coursera)	Nov 2023
– Project Management Principles and Practices (Coursera)	Feb 2025
– Google AI Essentials (Coursera)	2025
– User Experience (UX) Research and Design (Coursera)
